

"The Natural Free-Energy Source That Serves Mankind"

FUEL

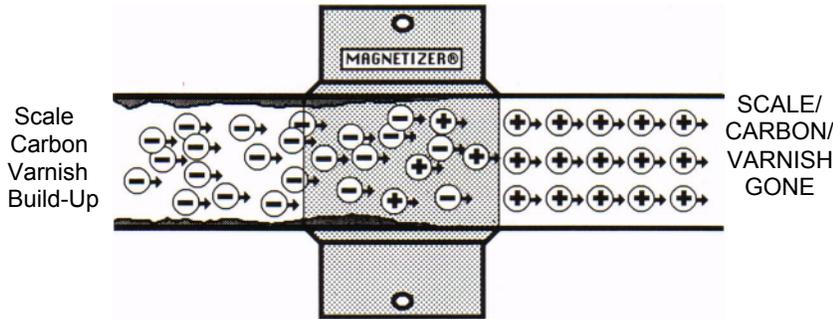

Reduces the consumption of heating fuel up to 35% by giving it a positive ionic charge for better oxygen bonding • Dissolves carbon/varnish build up in lines, jets, injectors, valves, chambers fireboxes for cleaner/efficient running • Polarizes fuel for nonhot-spotting uniform burn efficiency.

WATER

Reduces/eliminates the need for chemical additives to control scale buildup in heating systems and cooling towers • Dissolves mineral deposits in plumbing systems, improves performance, and maximizes water pressure • Converts hard water to soft water without salts, chemicals, or expensive softening equipment

Magnetic Technology

(Fig. 1)
WATER entering is natural, chaotic randomly placed molecules with crystalizing (scaling) minerals
FUEL entering is natural, chaotic randomly placed molecules with crystalizing (varnishing/carbonizing)

(fig. 2)
WATER exiting is now naturally soft with improved flavor while retaining the dissolved minerals from the improved molecular solvency so important to health but NOW WILL NOT HARM THE PLUMBING

WATER is a 'carrier vessel' of hard water minerals due to the naturally equal ionic (electric) charge between the minerals and the water. The minerals dissolve in the earth and are transmitted by the water to all parts of the internal surface of the plumbing where they scrape along to re-crystalize and reform as hard rock scale. (Fig. 1) This scaling is naturally progressed at all heating surfaces in the water heater. When water is magnetically charged, it electrically takes on a greater ionic charge than the minerals which creates a natural magnetic attraction between the two. The magnetization then attracts and locks the dissolved minerals into the water creating healthy and cost-free descaling. (Fig. 2)

FUEL The Magnetizer ionically bonds oxygen to the hydrocarbon molecule for a more efficient and explosive gas. Magnetizing the fuel also polarizes the mixture by replacing the naturally chaotic gas mixture with an evenly S-/I' charged, uniformly-aligned gas, which results in a total burn for complete BTU output (no hot spotting), and better fuel efficiency. The magnetic fuel also attracts and removes previous carbon build-up in the jets, injectors and the engine for even higher efficiency.

Applications

There is a never-ending list of applications because of the wide range of benefits in the treatment of fuel and water situations in the commercial, industrial and agricultural environment. A few examples are:

FUEL • Gas • Diesel • Fuel Oil • Cars • Boats • Trucks • Home • Industry • Furnaces
WATER • Spas • Irrigation Systems • Dish Washers • Boilers • Distillers • Oil Coolers • Chillers

MATERIAL: ceramic alloys permanently magnetized.

Specifications

POWER RATING: up to 11,000 gauss/unit ♦ **No. OF MAGNETS PER UNIT:** determined by pipe size.

SIZE: pipe sizes of 1/4" to 12" in diameter (larger sizes available by special order.)

INSTALLATION: no tools or plumbing modifications required. ♦ **SERVICING REQUIREMENTS:** NONE

Guarantee

UNCONDITIONAL MONEY-BACK GUARANTEE • PERMANENT POWER WARRANTY ABSOLUTELY • HAZARD FREE • NO U.L APPROVAL REQUIRED
